

CLAIMS

- Sub
au* ↗ 1. A virtual keyboard comprising a displays for displaying a keyboard, a transparent pressure-sensitive panel disposed on the displays and a processor for receiving information of positions detected and sent in a time sequence from the pressure-sensitive panel when a combination of a general key and a special key in the keyboard is pushed at a time, identifying a position of the pushed general key according to the received position information and outputting a code corresponding to the pushed combination of the special key and the general key.
2. A virtual keyboard as defined in claim 1, wherein one of the received position information is a middle position between the pushed positions being selected as a furthest position from the special key in the information of positions detected in a time sequence and the position of the general key is determined by doubling a distance from the special key to the furthest position.
